

Simtec Consult - AI Use Policy

Version: 1.0

Status: Approved

Owner: Director

Applies to: All staff, contractors, software development, documents, customer work, and company data

Related to: Data Protection and Retention Policy, Secure Software Development Policy, Supplier and Cloud Service Security Policy

Last reviewed: 2026-06-03

Next review due: 2026-09-03

Purpose

This policy sets rules for using AI tools safely and responsibly in Simtec work.

Policy

AI tools may be used to support drafting, research, coding, debugging, review, summarisation, and operational work where the use is appropriate and does not breach confidentiality, data protection, customer obligations, or security requirements.

Staff and contractors must not enter confidential client data, personal data, secrets, passwords, tokens, API keys, SSH keys, private keys, production data, unpublished customer information, or commercially sensitive information into AI tools unless a Director has approved the tool and use case.

AI-generated content must be reviewed before use. The person using the output remains responsible for correctness, security, licensing, confidentiality, and suitability.

AI-generated code must be treated like any other code contribution. It must be reviewed, tested where appropriate, checked for security-sensitive behaviour, and must not introduce secrets, unsupported dependencies, licence concerns, or unverified claims.

AI tools used for business work should be approved or recorded where they materially process company or customer data. Supplier, data protection, and customer contract requirements must be considered before using AI tools with non-public information.

AI may be used to review policy documents, registers, and tasks, but it must not invent evidence, approvals, incidents, signatures, certification details, or completed actions.

Review

This policy is reviewed at least annually and when AI tools, customer obligations, data processing, or relevant UK guidance changes.
