

Simtec Consult - Cyber Governance Policy

Version: 1.0

Status: Approved

Owner: Director

Applies to: directors, employees, contractors

Related to: Cyber Essentials, UK Government Cyber Governance Code of Practice

Last reviewed: 2026-06-03

Next review due: 2026-09-03

Purpose

Simtec Consult Ltd manages cyber security as a business risk, not only a technical issue. This policy sets out director-level ownership, oversight, and review expectations.

Policy

The Director is responsible for setting cyber security expectations, approving material policies and exceptions, and ensuring Cyber Essentials controls remain in place through the certification year.

Cyber risks must be reviewed when they could materially affect customer delivery, hosted services, company or client data, legal obligations, Cyber Essentials certification, reputation, or commercial operations.

Security work should prioritise identity and access, customer applications and hosting, source code and deployment, business cloud services, backups and recovery, and compliance with Cyber Essentials and UK data protection law.

Staff and contractors must understand the security responsibilities relevant to their role, including remote working, MFA, password manager use, secure handling of client data and secrets, phishing awareness, incident reporting, and secure development.

At least annually, the Director must review the policy register, Cyber Essentials scope, cloud service register, device/server/software inventories, supplier security risks, backup and restore evidence, incidents, open risks, and exceptions.

Exceptions to security policy must be approved by a Director, time limited where practical, and recorded with the reason, affected system or supplier, risk, compensating controls, and review date.

Review

This policy is reviewed annually, after significant incidents, and when Cyber Essentials, NCSC, IASME, ICO, or relevant UK Government guidance materially changes.
