

Simtec Consult - Secure Configuration Policy

Version: 1.0

Status: Approved

Owner: Director

Applies to: All staff

Related to: Cyber Essentials

Last reviewed: 2026-06-03

Next review due: 2026-09-03

Purpose

Devices, servers, and cloud services must be configured to reduce avoidable security risk.

Policy

Default passwords must be changed before devices, servers, or services are used for work.

Unneeded software, services, browser extensions, cloud apps, and accounts must be removed or disabled.

Only necessary user accounts may remain on devices, servers, and cloud services. Guest accounts and shared accounts must not be used for business systems.

Devices must lock when not in use and require password, PIN, or biometrics to unlock.

Features that allow downloaded or imported files to run automatically without user authorisation must be disabled or not used.

AWS Lightsail servers should run only the services required for the hosted application or monitoring tool.

Review

Secure configuration is reviewed at least annually and when systems or services change.
