

Simtec Consult - Approved Software and Cloud Services Policy

Version: 1.1

Status: Approved

Owner: Director

Applies to: All staff

Related to: Cyber Essentials

Last reviewed: 2026-06-22

Next review due: 2026-09-22

Purpose

Simtec must know which software and cloud services are used for company work and ensure they meet Cyber Essentials expectations.

Policy

Staff must use approved software and cloud services for company work. Unapproved, unsupported, or unlicensed software must not be used.

Current approved cloud services include AWS Lightsail, Cloudflare, GitHub, Google Workspace, Asana, LinkedIn, Pipedrive, Xero, and Passwd.

Google Workspace web apps are the approved office applications for creating organisational data.

Approved application sources are Apple App Store, Google Play Store, trusted signed Linux repositories, official vendor sources, and supported browser/application auto-update channels.

Work applications and approved sources must be recorded in the software inventory.

Self-hosted external services such as Dokploy, Uptime Kuma, and Beszel must be recorded, have a business owner, and require MFA or passwordless authentication where supported.

New software or cloud services must have a business need and Director approval before use. MFA must be enabled where available.

Review

The software and cloud service inventory is reviewed at least annually and when staff introduce or remove services.

Review History

Date	Reviewer	Description	Next review due
2026-06-22	Policy Manager	Clarified approved application inventory and self-hosted external service controls.	2026-09-22
2026-06-03	Policy Manager	Created current policy document aligned to Simtec requirements and relevant Cyber Essentials answers.	2026-09-03
