Approval status: Approved

Simtec Consult Limited is committed to operating responsibly, reducing avoidable environmental impacts and contributing positively through its people, services, purchasing and business relationships. Our approach is proportionate to a predominantly remote software development and consultancy business.

1. SCOPE AND RESPONSIBILITY

This policy applies to directors, employees, workers, consultants and contractors. The Managing Director has overall responsibility. Everyone working for Simtec must consider environmental and social impacts when making decisions and must follow relevant customer, supplier and legal requirements.

2. ENVIRONMENTAL COMMITMENTS

Simtec will:

- comply with applicable environmental law and customer requirements;
- use remote meetings and digital records where effective, reducing unnecessary travel, printing and physical storage;
- plan necessary business travel sensibly and favour lower-impact options where reasonably practicable;
- use supported, energy-efficient equipment and extend useful life through maintenance, reuse and secure refurbishment where appropriate;
- reuse, recycle or use authorised waste routes for electrical equipment, batteries, packaging and other business waste;
- consider energy use, data location, resilience and environmental credentials when selecting material cloud and technology suppliers;
- avoid exaggerated or unsupported environmental claims and communicate performance honestly.

3. SOFTWARE AND CUSTOMER DELIVERY

Software design and hosting decisions should consider efficient architecture, unnecessary data retention, avoidable processing, infrastructure use and end-of-life arrangements, alongside security, reliability and customer needs. Where Simtec provides environmental, waste or carbon-management functionality, the system must present data and calculations transparently and must not imply outcomes that have not been evidenced.

4. RESPONSIBLE BUSINESS AND SOCIAL VALUE

Simtec will conduct business honestly, treat people fairly and support responsible supply chains. This includes compliance with the Anti-Corruption and Bribery Policy, Anti-Slavery and Human Trafficking Policy, Equality, Diversity and Inclusion Policy, Whistleblowing Policy and data-protection and security requirements.

We will seek opportunities, proportionate to our size and capability, to:

- use local and small suppliers where they offer suitable value, capability and standards;
- support skills development and share relevant knowledge and good practice;
- design accessible and usable digital services;
- support community or charitable activity approved by the Managing Director without creating conflicts of interest;
- pay suppliers in accordance with agreed terms and address disputes promptly and fairly.

5. **SUPPLY CHAIN**

Supplier selection and management will consider capability, security, data protection, labour standards, ethical conduct and environmental impact in proportion to the service and risk. Simtec may request evidence, require corrective action or end a relationship where serious or unresolved non-compliance is identified.

6. **OBJECTIVES AND MONITORING**

Simtec will review its significant environmental and corporate-responsibility impacts at least annually. Initial priorities are to maintain a predominantly remote operating model, minimise unnecessary business travel, manage electronic equipment responsibly, review material technology suppliers and improve the recording of business travel and other measurable impacts where proportionate.

The Managing Director will consider incidents, complaints, supplier concerns, travel, equipment disposal and relevant customer feedback during the annual review and will set practical improvement actions where needed.

7. **REPORTING CONCERNS AND REVIEW**

Concerns should be raised with the Managing Director or through the Whistleblowing Policy. This policy will be reviewed at least annually and following a significant incident, legal change or material change in Simtec's services or operating model.

APPROVAL
