

Simtec Consult - Security Update Policy

Version: 1.0
Status: Approved
Owner: Director
Applies to: All staff
Related to: Cyber Essentials
Last reviewed: 2026-06-03
Next review due: 2026-09-03

Purpose

Supported and updated software reduces exposure to known vulnerabilities.

Policy

Operating systems, browsers, applications, server software, and cloud services used for company work must be supported by a supplier that provides security updates.

High-risk or critical security updates for operating systems and software must be installed within 14 days of release.

Automatic updates must be enabled where supported. Windows, macOS, iOS, Android, browsers, and AWS server security updates should use automatic updates where practical.

Linux desktop updates must be checked regularly and high-risk or critical security updates applied within 14 days.

Unsupported software must not be used for company work. If unsupported software is found, it must be removed or replaced with a supported alternative.

Review

Update arrangements are reviewed at least annually and when devices, software, or servers change.
